

React + Vite

Source: frontend/README.md

React + Vite

This template provides a minimal setup to get React working in Vite with HMR and some ESLint rules.

Currently, two official plugins are available:

- `@vitejs/plugin-react`(<https://github.com/vitejs/vite-plugin-react/blob/main/packages/plugin-react>) uses `Babel`(<https://babeljs.io/>) (or `oxc`(<https://oxc.rs>) when used in `rolldown-vite`(<https://vite.dev/guide/rolldown>)) for Fast Refresh
- `@vitejs/plugin-react-swc`(<https://github.com/vitejs/vite-plugin-react/blob/main/packages/plugin-react-swc>) uses `SWC`(<https://swc.rs/>) for Fast Refresh

React Compiler

The React Compiler is not enabled on this template because of its impact on dev & build performances. To add it, see [this documentation](https://react.dev/learn/react-compiler/installation)(<https://react.dev/learn/react-compiler/installation>).

Expanding the ESLint configuration

If you are developing a production application, we recommend using TypeScript with type-aware lint rules enabled. Check out the [\[TS template\]](https://github.com/vitejs/vite/tree/main/packages/create-vite/template-react-ts)(<https://github.com/vitejs/vite/tree/main/packages/create-vite/template-react-ts>) for information on how to integrate TypeScript and [\[typescript-eslint\]](https://typescript-eslint.io)(<https://typescript-eslint.io>) in your project.
